

This year Rock Pillars is celebrating 20 years of innovation and dedication to producing the finest climbing shoes available. We proudly design and hand craft all our shoes here in Europe with the finest materials available. To mark this milestone we are releasing seven brand new models featuring our latest technology.

Diamond

The Diamond represents the pinnacle of our Lace Up design. Built on our new Excentric last, its aggressively down-turned shape and molded mid-sole concentrate power in the toe for superior edging, while the sculpted heel and anatomical lacing wrap the boot around one's foot for unparalleled precision and comfort. Made of split leather and microfiber with strategically placed lining, it provides a soft next-to-skin touch while keeping stretching to a minimum.

Ozone QC and Ozone Slipper

EXCENTRIC

EXCENTRIC

After three years of development, we are finally releasing our patented 3-Force® technology on the Ozone QC and Ozone Slipper. Our 3-Force® construction wraps the rand around the forefoot to actively stabilize the boot and minimize twisting and loss of power while edging. This allows us to use a softer, more sensitive sole underfoot while not losing any edging power. Built on our new Excentric last, the Ozone takes climbing footwear to a new level.

Top Gun LU

The lace up version of our ever popular Top Gun QC, it provides all characteristics you have grown to love with a more precise closure system. The over-the-toe rubber provides superior grip on toe hooks and jams, while the Vibram XS Grip sole sticks to the tiniest edges and smears.

Strike and Strike QC

The result of 'trickle-down' technology, the Strike features precise construction and quality materials in a more relaxed shoe. Made from synthetic leather uppers with a plush lining, the Strike provides an exact fit with all day comfort. Its relaxed heel keeps the shoe securely on the foot without exerting too much pressure in the toe box.

Canyon

Our very first approach shoe, the Canyon combines our twenty years experience in climbing shoes with the versatility of a hiker. The fully randed toe box and sticky rubber sole combined with to-the-toe anatomic lacing gives excellent feeling on the rock, while the molded PU mid-sole and our innovative honeycomb gel insole provide all day comfort for walking and hiking. Beautifully styling and robust construction make the Canyon a favorite for both the crag and the pub.
